Job Description: Backend Developer

Seeking a Backend Developer to design and maintain server-side application logic.

Key Responsibilities

- Build and maintain scalable backend services.
- Design and manage databases.
- Implement APIs and integrate third-party services.
- Ensure security and data protection.

Required Skills

- Proficiency in Java, Python, or Node.js.
- Experience with MySQL, PostgreSQL, or MongoDB.
- Understanding of RESTful APIs.
- Knowledge of authentication and authorization mechanisms.

Professional Experience

- 2+ years of backend development experience.
- Experience with cloud platforms is a plus.
- Hands-on API development experience.
